

Prompt 1: Summarize:

"I have attached [paper]. I want to use it as background for a seminar on Gotham and mass surveillance.

Please do not write a long narrative summary for me. Instead:

In 4–6 short bullet points, explain the main idea of the paper at a high level.

Identify which parts of the paper are most relevant to these three attributes:

- A1 bulk data collection
- A2 integration of heterogeneous / third-party data
- A3 storage / retention for future analysis

For each attribute, list the section(s) or page range and a very short description (max 1–2 sentences) of how the paper treats it.

Point me to any tables, figures, or explicit lists of attributes that I should read carefully myself.

Keep answers brief and high-level.

Prompt 2: paraphrasing / clarity:

Here is a paragraph I drafted for my seminar paper/slides.

[Paste your own text here.]

Please **do not** change the meaning or add new claims. Do not hallucinate. Rewrite it **more concisely and clearly** in 1–2 sentences suitable for a slide, keeping the structure and argument the same. Then tell me in one line how your version differs in tone or length from mine.
